Top performances

In the past, many companies with a good know-how used to do business in the aluminum industry, but some of them vanished for various reasons. ALCUTEC managed to legally acquire the technology of some of these companies and to develop it further to an optimal synthesis.

ALCUTEC's engineering team has been able to present and introduce mature and well-developed strategies for facilities of the aluminum industry on this basis. The know-how acquired from international projects in Southern Africa, Germany, Turkey, Venezuela, the USA, Bahrain, Saudi Arabia, Russia and elsewhere as well as the experience gained there can thus be applied to new projects. This wealth of experience is, at the same time, a firm basis for developing new technologies and for improving existing strategies. The motto "Stagnation means regression" applies to ALCUTEC, too.
